. .

DETAILED ACTION

1. This Office action is responsive to the replies to the restriction and election of species requirement dated July 12, 2006 and July 28, 2006.

Applicant elected Group I, claims 1-9. Applicant's election of Group I in the reply filed on July 12, 2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

With regard to the election of species requirement, applicant elected "the species as identified in claim 6". This indication of a species does not fully comply with the specific request made in the election of species requirement, which asked for identification of each R group of the formula. Applicant's election appears to include Formula A where R^e and Rⁱ are cyano groups. Although applicant's election is more broad than what was requested, the examiner is considering the species where R^e and Rⁱ are cyano groups in Formula A.

Claims 1-9 are under consideration. Claims 10-26 are withdrawn as non-elected.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

⁽a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

⁽e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Page 3

Art Unit: 1774

3. Claims 1, 2, and 5-9 are rejected under 35 U.S.C. 102(a) as being anticipated by Ishibashi et al. (WO 2004/003104 A1) [Note the inventive entity is not identical to the present application].

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Ishibashi et al. discloses organic electroluminescent elements wherein the luminescent layer comprises a mixture of at least one styryl compound of formula [I] wherein X represents an aryl group and Y represents a group whose skeleton consists of an aminophenyl group (see abstract).

$$Y - CH = CH - X$$

Compound (17)-82 on page 18 is a representative example of formula [I] that reads upon the instant formula A.

The device comprises a hole transport layer and an electron transport layer (see abstract) per claim 5.

4. Claims 1, 2, and 5-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Ishibashi et al. (US 2005/0064232 A1; US filing date - February 2004).

The applied reference has common inventors with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Ishibashi et al. discloses at page 11, paragraph 140, Example 11, a device comprising a mixed light emitting layer comprising Compound 3 according to instant Formula A:

[Compound 3]:

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re*

Art Unit: 1774

Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1-9 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5, 8, 10-14, and 17 of copending Application No. 10/487,584 (US Publication No. 2005/0158577 A1). Although the conflicting claims are not identical, they are not patentably distinct from each other because application '584 sets forth an electroluminescent device which may comprise styryl compounds overlapping with those of instant formula A. For example, compound (17)-82 of claim 10 reads upon instant Formula A.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dawn Garrett whose telephone number is (571) 272-1523. The examiner can normally be reached Monday through Friday.

Application/Control Number: 10/807,984 Page 6
